#### **SUPPLEMENTARY INFORMATION:**

##### **I. Abstract**

This request is for extension of a currently approved information collection.

The National Marine Fisheries Service (NMFS) requires pelagic longline vessel operators to notify NMFS in the event an endangered short-tailed albatross is

hooked or entangled during fishing operations. Following the retrieval of the seabird from the ocean, as required by Federal regulations, the vessel captain must record the condition of the injured short-tailed albatross on a recovery data form. A veterinarian will use the information in providing advice to the captain caring for the short-tailed albatross. If the albatross is dead, the captain must attach an identification tag to the carcass to assist the U.S. Fish and Wildlife Service (USFWS) biologists in follow-up studies on the specimen. This collection is one of the terms and conditions contained in the biological opinion issued by USFWS, and is intended to maximize the probability of the long-term survival of short-tailed albatross accidentally taken by longline gear.
